

OpenHouse Intelligence

Your AI-powered operating system for the
modern real estate agent.

Spend less time managing your CRM. Spend more time building relationships.

Real estate agents have data everywhere, but **intelligence nowhere.**

The Scattered Inputs:

- Text messages
- Voice notes
- Emails
- Business cards
- Google Sheets
- Legacy CRMs

The Result

- • Information gets lost.
- • No intelligence.
- • No analytics.
- • Nothing helps the agent get better.

Just tell your agent **what happened.**

The AI agent reads and writes directly to the CRM through natural language.

"I met Sarah Chen at the open house. She wants a 3-bed home in Bellevue under \$1.2M."

"Remind me to follow up with Marcus on Thursday."

"Which active buyers need attention today?"

Chat with your agent

Same agent as Discord

Which active buyers need a follow-up?

Which Bellevue buyers need a follow-up?

Real analytics. Period.

Pipeline health, conversion, lead aging, source performance, and next-best actions — generated from live CRM data without manual data entry.

OpenHouse Intelligence

The AI-Powered Operating System for Real Estate

Market Data (RAG)

Dynamically enriches queries with hyper-local real estate market context.

Capture

Agents work naturally. Send text messages, voice notes, or Discord commands.

Virtual AI

Translates unstructured conversations into structured intents and actions.

OpenClaw

The central orchestrator executing controlled logic based on AI directives.

READ/WRITE

Client DB

Secure SQLite storage housing all CRM records and history.

```
- clientId  
- name  
- address  
- email  
- phone  
- birthday
```

Scheduled Briefs

Actionable reminders pushed back to the agent automatically.

Dashboard

Live pipeline metrics, conversions, and geographic analytics.

The CRM finally works for the agent.

Less administration

Faster follow-up

More closed deals

OpenHouse Intelligence turns scattered conversations into
an intelligent, always-on real estate operation.
